

Breeding schedule

6 weeks before pairing you can give a 10 day cure against parathyphus then 5 days **HERBOCHOL PLUS**.

If the pigeons have had problems with parathyphoid you can also vaccinate against parathyphoid after the **HERBOCHOL PLUS**.

2 weeks before pairing vaccinate against paramyxo or herpes paramyxo.

1 week before pairing

For 7 days **HERBO OMEGA OIL** and **HERBO CONDITION MIX** on the food.

PAIRING

The first week after pairing.

For 7 days **HERBOSOL** or **PROVIT FORTE** in the water.

Thereafter every week until the youngsters are weaned:

2 days **HERBO CONDITION MIX** and **HERBO OMEGA OIL** on the food.

2 days **HERBOSOL** or **PROVIT FORTE** in the drink.

During breeding you can do a cure of 5 days anti-tricho.

If the pigeons are too fat, you can also give them **HERBOCHOL PLUS** 3 days a week during breeding.

During breeding, minerals are very important so give them fresh **HERBO MINERAL MIX** every day.

If the breeders do not have good bowel movements you can give them Herbo prob and **HERBOSOL** on the food for 5 days during breeding.

WHEN WEANING THE YOUNGSTERS PIGEONS:

1 coxi tab and 1 tricho tab

Vaccinate against rota paramyxo.

3 weeks later vaccinate again against rota paramyxo.

3 weeks later possibly vaccinate against smallpox.

3 weeks later, possibly vaccinate against parathyphoid (then you can already be training or playing the youngsters but this is not a problem if you do it on a Monday).

FROM WEANING TILL THE FIRST TRAININGS TO THE YOUNGSTERS:

Every week

2 days **HERBO PROB** en **HERBOCHOL** on the food.

2 days **HERBO AQUA CONTROL** in the drinking water.

2 days **HERBO MA** in the drinking water.

DURING THE TRAININGS

2 days **HERBO PROB** en **HERBOCHOL** op the food.

2 days **HERBO AQUA CONTROL** in the drinking water.

1 day **HERBO CONDITIEMIX** en **HERBO OMEGA OIL** on the food.

2 days **HERBO MA** in the drinking water.
